Castiglione at the Qing Court — An Important Artistic Contribution

Yang Boda

Born in Milan on 19 July 1688, the Jesuit missionary Giuseppe Castiglione arrived at the Qing (1644-1911) court in Beijing on 22 November 1715. He was to remain there for fifty-one years in the service of three emperors — Kangxi (1662-1722), Yongzheng (1723-35) and Qianlong (1736-95) — until his death on 10 June 1766 at the age of seventy-eight. Known to the Chinese as Lang Shin-court; he had to learn the language, distinguishing him as one of the great court painters of the Qing dynasty.

It took great courage for Castiglione to come to China and work at the court; he had to learn the language, traditions, way of thinking and customs of his host country. In particular, he had to adapt the oil-painting skills of the baroque tradition, which he had acquired in Italy, to suit imperial tastes — no easy accomplishment. However, he was obliged to follow the wishes of the emperors in order to further his religious goal of converting the imperial court and eventually the Chinese people to Catholicism. Castiglione thus served the court with the same religious devotion that he served God. This devotion may have resulted in the Jesuit’s unique relationship with three emperors as a highly valued court painter, and, consequently, the closeness of that association was reflected in his paintings, several of which are discussed in this article.

On his arrival, Castiglione was fortunate to come to the attention of the Kangxi emperor, then an ailing man of sixty-two years, who had expressed a keen interest in Western science throughout his life. Castiglione painted for the aged emperor for seven years and, at the same time, ten students were assigned to him to learn the techniques of oil painting. When the Emperor died in 1722, his fourth son ascended the throne, assuming the reign name Yongzheng.

In the same year, Castiglione visited the Shuangsui (meaning ‘twin lotus stalk’) valley to see the rare lotus stalk, and subsequently painted Jurui Tu (Assembled Auspicious Objects,聚瑞圖; Fig. 1). The accompanying colophon describing the objects reads, ‘Gather and draw a vase of flowers in order to fulfill propriety’ (灌寫瓶花, 以誌祥應). The painting is distinctive for its bright colours and vitality as well as for the exceptional elegance of the meticulous brushwork defining the flowers.

Executed in ink and colours on silk, it follows neither the conventions of Western oil painting, nor is it purely rendered in the style of traditional Chinese painting.

This fusion of the techniques of oils with those of Chinese ink and pigments represented the emergence of a school of painting which Castiglione developed from his seventh year at the court onwards. All of Castiglione’s paintings thereafter were emblematic of this school, each one achieving a greater realism and perfection. Castiglione painted alongside many of the court artists and craftsmen who worked at the atelier in the Ruyi Guan (Hall of Fulfilling Aspirations,如意館) of the Yuanming Yuan (Garden of Perfect Clarity,圓明園), an imperial summer palace outside Beijing. His status at the Imperial Academy rose progressively, subordinate only to the Manchu painter Tang Dai (1673-c. 1751), who held the position of Supervisor of the Imperial Household.

In the late Yongzheng period, Castiglione began painting portraits and bird and flower paintings (Fig. 2) for the Crown Prince Hongli (1711-99), who eventually ascended the throne as the Qianlong emperor. In the first year of Qianlong’s reign, Castiglione enjoyed equal status with Tang Dai and, after several years, was promoted to chief painter. It was during the Qianlong period that Castiglione painted his finest works.

The variety of subject matter in Castiglione’s paintings was stimulated by the activities of the Qianlong emperor as is demonstrated in the painting Xiaolu Tu (Deer Hunting Patrol, 哈鹿圖; Fig. 3). In the sixth year of his reign (1741), Qianlong revived the ritual of hunting in the autumn, which had not been practised for over ten years. The event of the emperor and his entourage leaving the palace and hunting in the royal parks outside Beijing generated a new subject for Castiglione’s court painting.

In 1747, construction began on the European-style Great Fountain (Da Shuifa 大水法) and the surrounding buildings, known as the Xieqi Qu (Palace of Delights and Harmony, 謝竇趣), which lay adjacent to the Yuanmings Yuan, in the northwest section of the Changchun Yuan (Garden of the Long Spring,長春園). (See Michèle Pirazzoli-t’Serstevens’ and Victoria Siu’s articles in this issue, pp. 61-71 and pp. 72-79.) Almost three years later, the buildings were near completion, and in 1751, Castiglione was commissioned to provide the designs for the decoration of their interior. His rank was immediately upgraded to Official of the Imperial Household. Qianlong directed that the walls of the Belvedere (Fangwai Guan 方外館) and the Haiyan Tang (Palace of the Calm Sea, 海晏堂), the two buildings beside the fountains, should be decorated with paintings of the gardens to the east of the Xieqi Qu.

Castiglione’s painting was not only affected by domestic activities, the military campaigns of the time also dictated the subject matter which he was required to paint. In 1759, Prince How succeeded in repressing the rebellion between the Dzungars and the Moslems, although it had taken over four years to do so. This conflict became another fresh subject for Castiglione (Fig. 4), who was, together with other court painters, commissioned to produce sixteen illustrations of these battles, the first in a series of ‘war’ paintings.

Toward the end of his life, Castiglione attained the rank of a third-class official and was posthumously awarded by Qianlong the title of Shilang (Vice-president of one of the Six Boards, 太常寺卿), the highest honour the Jesuit was ever awarded. The emperor also ‘expressed his special condolences’ with 300 liang of silver for funeral expenses. Such recognition was certainly due, not only for Castiglione’s industrious and dedicated artistic production, but also for the vigorous stylistic transformation that the Jesuit exacted from himself. This self-discipline resulted in his strong influence upon Qing court painting of the time. Castiglione’s contribution is manifested in the four categories discussed below: oil painting, painting in the xianfa (line method) style, a new school of painting comprising an amalgamation of Western and Chinese styles and lastly, architectural design and craftwork.

From the murals painted by Castiglione at Genoa Cathedral, it is apparent that he had been well-trained in drawing and painting, and that, even in his early years, he had great creative ability. When he arrived in China and entered the service of the emperor, he was the only painter at the Imperial Academy skilled in the techniques of oil painting. In 1743, however, there were twenty-two Jesuits living in Beijing and, in addition to Castiglione, two of these were attached to the court as painters: Father Jean-Denis Attiret (1702-68) and Father Ignaz Sichelbath (1708-80). Castiglione, however, retained preeminence at the Ruyi Guan. His skills as an oil-painter, his position at court and the support of three successive emperors gained Castiglione the privilege of having his paintings displayed in the great halls of the Forbidden City, the Yeonghe Gong (The Lama Temple, 僧宮), Yuanming Yuan, Changshun Yuan, the European Palaces (Xiyang Lou 西洋樓) and the summer palace at Chengde (承德) among others. Paintings for the rooms of these palaces were mostly executed using multi-layered Chinese paper upon which the colours of oil-paintings could be convincingly recreated. Castiglione painted women, flowers and plants, animals, landscapes, architecture, and horizontally arranged consecutive scenes.

Although Castiglione’s principal creative output was of oil paintings, due to ageing, poor preservation, war and fire, few of those painted at the Qing court survive today. The Palace Museum in Beijing only possesses the oil telaun painting, ‘Rashi Yu Shashih Tu (Grand Tutor and Young Tutor, 大學士圖)’ illustrated with the rebus of a lioness and her cubs. Despite the Western-inspired chiaroscuro, brushwork, composition and arrangement in these works, they are truly imperial court paintings. Having mastered the skill of adapting to imperial taste and will, Castiglione also trained nineteen painters from various studios. Oil painting was not the only Western artistic concept imported to China by religious men; rules of perspective were also first brought by missionaries at the end of the Ming dynasty (1368-1644). The court records referred to the perspective style as xianfa (line method), a term based upon its use of ‘lines drawn radiating from a fixed point’. Xianfa could be applied to the depiction of buildings, roads and to many other subjects, in combination with the traditional Chinese style of painting known as gongbi 供筆, a meticulous, realistic representation of

an object, and jiehua 介花, a finely detailed use of brush, ink and pigments. Thus, court xianfa painting became classified as gongbi jiehua.

Xianfa was also used for paintings of figures, animals, vegetation and other subjects (Fig. 5), and was particularly admired by the emperors when it was used to create a trompe-l'oeil effect of space and distance in imaginary scenes which seemed to extend beyond the room where the painting was displayed. Most court xianfa paintings were comparatively large and were attached to the wall by an adhering method which allowed the painting to be removed later (see Zhu Jian's article, 'Castiglione's Tiello Paintings' in this issue, pp. 80-83.) Most of them were executed on paper or silk in the gongbi method with rich colours. Qing archives of the Administrators of Creative Works also refer to tongjinghua (perspective painting, 透景画) which was executed using the xianfa style.

Castiglione was the main proponent and teacher of xianfa. His students, Ding Guanpeng (act. c. 1750-60), Zhang Weixing (1738-93), Dai Zheng, Wang Youxue and Bai Tang'a, all learned eventually becoming masters of it in their own right, although they did need Castiglione's assistance in creating scenes of greater complexity. Xianfa became a particular painting genre within the Imperial Academy, however, only a small proportion of the court painters mastered it and were specifically appointed to paint in this style. Indeed, with the demise of the Jesuit painters, these local artists had to assume responsibility for repainting the old and creating new xianfa paintings.

Only a few artists successfully absorbed the techniques of Western painting following its introduction in the late Ming and were able to apply them to traditional Chinese painting. The painter Cong Jing (1556-1610) mastered the techniques of Western painting and portraiture and during the Kangxi period Jiao Pingshen (1660-1720), Leng Mei (1662-1722), Chen Mei and other court painters changed their styles after observing Western painting techniques. From the point of view of a Jesuit who had acquired his artistic skills as part of his religious training, Castiglione differed greatly from these painters. By adapting his former training with a deliberation of Chinese painting traditions and use of Chinese media, Castiglione created a new style which also appealed to the emperors' aesthetic sense. This constitutes a significant accomplishment worthy of admiration.

A close study of the extant paintings by Castiglione in the xianfa style reveal three predominant characteristics. The first is that Castiglione's still-life paintings make use of Western-style chiaroscuro employing Chinese media. Juru Tu (Assembled Auspicious Objects, 九福図; see Fig. 1) painted in the Yongzheng period and the Wuru Tu (Auspicious Objects, 九福図; Fig. 6) both possess a three-dimensionalism. The shadows are not too heavy, nor are the highlights too bright, and the overall effect achieved is subtle and harmonious, reminiscent of the Chinese mengfa (boneless method, 仿木花) painting style.

Second, Castiglione used Chinese media in combination with a technique which relied on line and colour to produce a three-dimensional effect and linear beauty similar to the gongbi style. However, under close scrutiny, it is obvious that the colours on these paintings were applied in light and dark shades with no brush strokes apparent and that the works lack a certain vigour. In fact, these paintings employ a representationalism and a brushwork more typical of Western painting as in the handscroll Baiju Tu (A Hundred Steeds, 白居易) and in Ayuxi Assailing the Rebels with a Lance (阿玉喜刺反賊, see Fig. 12 of Victoria Siu's article in this issue, p. 78).
Third, Castiglione's skill in portraiture was developed under imperial tutelage. He began painting commissioned portraits of the emperors, known as yurong, and of the imperial household from the Yongzheng period onwards. The portraits painted of Qianlong from when he was the young Prince Hongli to when he was forty-five years old can be established as a series executed over a period of about thirty years. They reveal the changes in Hongli's features as well as the development of the artist's style in portraiture. All Castiglione's portraits were drawn from life, and each achieves greater realism and animation. However, it is apparent that Castiglione used several methods to enhance the Qianlong emperor's appearance such as a combination of strong and weak frontal lighting, subtle shadowing and the use of white and pink to give the face a certain effeminacy. Also, the Italian portraitist gave an ephemeral gleam to the pupils and a barely discernable highlight to the nose. These portraits are all extremely refined and elegant works. Thus, Hongli's praise of these paintings was not merely subjective.

Some of the finest of Castiglione's portraits are the Qianlong Huangdi Chaofu Xiang (Portrait of Emperor Qianlong in Ceremonial Dress, 乾隆皇帝朝服像; Fig. 7) portraying Qianlong as an intelligent and dignified figure and the Inauguration Portrait of Qianlong, (see Fig. 5 of Victoria Siu's article, this issue, p. 74), which includes artistic revisions of Qianlong and the imperial consorts. Although these ladies appear rather excessively made-up, the portraits do not lack the beauty and gentility that befits court ladies. Castiglione also painted portraits of princes, officials and even the imperial bodyguard, rendering them almost entirely with Western techniques but using Chinese media and artistic convention. Dissimilar to Western portraiture, these works achieve a more warmly intimate effect. They met with documented imperial approval, which testifies to their great success at court. The scope of court portraiture was not limited to the subject in a seated, ceremonially robed pose; many portraits feature the emperor banqueting, at annual rites, or on tour. The yurong which were signed by Castiglione differ from one another only slightly in the technique used and the costumes portrayed.

In the paintings mentioned above, Castiglione employed predominantly Western techniques while Ceng Jing, Jiao Pingzhen, Leng Mei and Chen Mei relied on their traditional training, making some superficial use of Western techniques. Although Castiglione's style differed from his Chinese contemporaries, it was his ability to incorporate Chinese aspects that allowed his paintings to meet with imperial approval. With this in mind, it is incorrect to designate Castiglione's style as a division of Chinese painting.

During the eighteenth century, burgeoning cultural exchange between East and West brought news to the Qianlong emperor of many technologies and objects which the Chinese officials at court were unable to produce or obtain. The emperor turned to the Jesuits for help, relying particularly upon Castiglione. Apart from painting, the Qianlong emperor required Castiglione to design and help construct architectural projects. This was difficult for the Jesuit who had never received formal training in the discipline, yet, for the sake of his religion, Castiglione endeavoured to meet the emperor's demands. The most challenging of these tasks was the design and construction of the European Palaces at Yuanming Yuan.

As Pirazzoli-t'serstevens discusses in her article (this issue, pp. 61-71), twenty copperplate engravings of the Western-style gardens, which were executed by disciples of Castiglione's, provide an excellent record of Castiglione's architectural projects. From these engravings and from the ruins remaining today, it is possible to deduce that the architectural design was based on Italian baroque, but was decorated and constructed according to the methods of the Qianlong period; like Castiglione's hybrid style of painting, the European Palaces blended Eastern and Western architecture.

The Qianlong emperor did not order the production of many plastic arts, but, according to Qing dynasty archives, it seems he occasionally would decree that Castiglione should do so. There is evidence that Castiglione worked in enamel, jade and lacquer; painted fans, tablets and plaques; created potted landscapes; and was skilled in glass lantern work, wrought ironwork and the manufacture of 'toys' which were moving figures on a rotating platform. Castiglione would present a design for imperial inspection and, usually, the Yongzheng and Qianlong emperors would approve its production. However, there were instances when Qianlong was not satisfied with the plan or the finished project and suggested changes. Qianlong knew that such revisions were his own responsibility, rather than any fault of Castiglione's; some of Qianlong's ideas were too fanciful to be carried out at all and Castiglione was obliged to abandon them.

As a oil-painter, proponent of the xianfa style, founder of the new court style which drew from both Western and Chinese painting, architect and craftsman, Castiglione's artistic impact cannot be underestimated. His life and work represent a half-century of creativity which linked Eastern and Western traditions. Using the skills he had learned in the West in combination with certain Chinese techniques and media, Castiglione's new style of painting resembled Chinese gongbi, yet did not deny its Western roots. This new school was one of the foremost achievements of Qing dynasty painting and it was continued by the missionaries who followed him and by his Chinese students. This group of artists enlivened the painting of the eighteenth century, a fact which should not be obscured.

Author's note
In commemorating the 300th anniversary of Castiglione's birth, recognition should be given to the genius and historic significance of Castiglione's art. Full co-operation should be granted to this effort to study his work, as this special issue of Orientations provides scholars with a concrete means of co-operation. I hope that this 'bridge' of co-operation will never be obstructed, and that as the study of Castiglione and his style widens and spreads, its successes will continue to enlighten and enrich our knowledge.
